

*AI  
concl*

wherein said image processing apparatus includes a receiver for receiving the prephotographing image data transmitted from said transmitter, and a display for displaying the prephotographing image data received by said receiver with the same number of pixels with which the image was captured by said photographing apparatus.

---

*Sub  
C/*

6. (Amended) A method for previewing image data captured by a photographing apparatus, the method including the steps of:

*As  
cont*

requesting the photographing apparatus to transmit captured image data of an object before the object is actually photographed;

receiving the captured image data from the photographing apparatus; and

displaying the received image data with the same number of pixels with which it was captured by the photographing apparatus.

7. (Amended) An image display system including a photographing apparatus, and an image processing apparatus connectable to said photographing apparatus, the image display system, comprising:

a mode setting unit for selectively switching said photographing apparatus into and out of a photographing mode;

a display for displaying an indicator through which an instruction for a photographing action is transmitted to said photographing apparatus; and

a controller for showing a photographed image display window to be displayed on said display when the photographing mode has been selected by said mode setting unit, and the object is photographed by said photographing apparatus in response to the instruction from said indicator.

8. (Amended) A method for displaying image data taken by a photographing apparatus, the method including the steps of:

*As  
cancel*

- selectively placing the photographing apparatus in a photographing mode;
- displaying an indicator for transmitting an instruction of a photographing action to the photographing apparatus; and
- displaying an image display window when the photographing mode has been selected, and the photographing action is taken by the photographing apparatus in response to the instruction.

*50  
C1*

12. (Amended) A program product on a recording medium executable by a computer, wherein the program requests that a photographing apparatus connected to the computer transmits captured image data of an object before the actual photographing, receives the captured image data from the photographing apparatus, and displays the received image data with the same number of the pixels with which the image was captured by the photographing apparatus.

*As  
Cancel*

13. (Amended) A program product on a recording medium executable by a computer, wherein the program selectively places a photographing apparatus connected to the computer into a photographing mode; displays an indicator for generating an instruction for a photographing action of the photographing apparatus on the computer; and displays a window for showing a photographed image on the computer when the photographing action has been taken in response to the instruction from the indicator.
